

Software Engineering for Services and Applications

Cluster Meeting Conclusions

Cluster's Research Roadmap

- The 8 research challenges presented in the position paper are a good starting point for further elaboration.
 - Mini-Task forces to work on the specific points (research challenges) – Challenge Specific reports to be authored
 - Look also the vertical domains and the key EC flagship initiatives to highlight where Software Engineering will have a big impact. Try researching the vertical domains of these initiatives. Try to engage vertical domain experts.
 - Cross-collaboration with other clusters on specific issues (Interoperability, Security, etc)
 - Try to merge Challenges/limit their number
 - Prioritize Challenges in a timeline

Communication Actions

- Explore options for Joint Participation in INDUSTRY events
- Having projects' blog posts in the EC website after green light from the EC
- Participation in NetFutures 2017 and other EC flagship events
- Identification of events from other domains (vertical domains) to promote knowledge sharing
- Design a 2-pager with the Cluster's description and mission, to be used as an invitation to newly funded projects – address also the Cloud "ICT-6-2016" projects in case they are interested
